

## QA Recruitment Task

1. Create 3 different test cases on the <http://qalab.pl.tivixlabs.com/>
2. Based on created test cases, please write automated E2E tests (preferably using Cypress + BDD, you can publish them to your Github account).
3. Please test the app: <http://qalab.pl.tivixlabs.com/> . If you find any bugs (surely, you will ;) ) **please report them**. Basic assumptions:
  - a user should be able to search for a car in a specific country/city,
  - to rent a car, the user needs to provide dates,
  - the user should be able to see car details after clicking "Rent" button,
  - the user should be able to provide personal data in the rent form,
  - find as many bugs as you can.

In case of any questions, **use your best common sense**.
